

Lloyd's Register Type Approval Test Specifications

This page contains the links to Test Specifications to be followed when applying for Type Approval.

The related Test Specifications are grouped together into the following documents:-

Test Specification Number 1: Performance and Environmental Test Specification for the following Environmentally Tested Products used in Marine Applications:

- Electrical Equipment
- Control and Monitoring Equipment
- Instrumentation and Internal Communication Equipment
- Programmable Electronic Systems

Test Specification Number 2: Performance and Test Specifications for the following Piping System Components primarily to be used in Marine Applications:

- Expansion pieces – Bellows and sliding types
- Filter units
- Flexible hose assemblies
- Mechanical pipe joints – Fixed connections
- Metallic formed pipe pieces
- Plastics pipes and formed pipe pieces
- Valves
- Air pipes closing devices

Test Specification Number 3: Performance Test Specification for Equipment to be used in Marine Applications:

- Electric Cables
- Circuit-breakers
- Fuses and Fuse Holders
- Fixed Submerged Electrical Equipment

Test Specification Number 4: Type testing for reciprocating internal combustion engines and associated ancillary equipment for Marine, Offshore and Industrial applications

Test Specification GT04: Type testing for gas turbines for Marine, Offshore and Industrial applications

Test Specification No. 917: Product type approval portlights for Special Service Craft
